

Energy Efficient Appliances

Looking to save money and get rid of some energy hogs in your home? Your appliances can account for up to 15% of your utility bills! The biggest electricity users are your refrigerator, clothes washer and dishwasher; the biggest gas users are your furnace or boiler, and water heater.

Look for an Energy Guide Label

The Energy Guide label provides an estimate of the products energy consumption or energy efficiency. It will show the highest and lowest energy consumption or efficiency criteria established by the US Department of Energy and the Environmental Protection Agency.

Look for an ENERGYSTAR Logo

This logo means that the appliance meets the ENERGYSTAR criteria established by the U.S. Department of Energy and the Environmental Protection Agency. These appliances and electronics typically use 10-20% less energy and standard models.

Dryers, ovens and electric ranges are not labeled.
